Investing in the funds involves a high degree of risk. Unlike traditional ETFs, or even other leveraged and/or inverse ETFs, these leveraged and/or inverse single-stock ETFs track the price of a single stock rather than an index, eliminating the benefits of diversification. Leveraged and inverse ETFs pursue daily leveraged investment objectives, which means they are riskier than alternatives which do not use leverage. They seek daily goals and should not be expected to track the underlying stock's performance over periods longer than one day. They are not suitable for all investors and should be utilized only by investors who understand leverage risk and who actively manage their investments. The Funds will lose money if the underlying stock's performance is flat, and it is possible that the Bull Fund will lose money even if the underlying stock's performance increases, and the Bear Fund will lose money even if the underlying stock's performance decreases, over a period longer than a single day. **Investing in the Funds is not equivalent to investing directly in AAPL, AMZN, GOOGL, META, MSFT, NVDA, and TSLA.**

An investor should carefully consider a Fund's investment objective, risks, charges, and expenses before investing. A Fund's prospectus and summary prospectus contain this and other information about the Direxion Shares. To obtain a Fund's prospectus and summary prospectus call 866-476-7523 or visit our website at direxion.com. A Fund's prospectus and summary prospectus should be read carefully before investing.

Direxion Shares ETF Risks – An investment in the ETFs involves risk, including the possible loss of principal. The ETFs are non-diversified and include risks associated with concentration that results from an ETF's investments in a particular industry, sector or company, which can increase volatility. The use of derivatives such as futures contracts and swaps are subject to market risks that may cause their price to fluctuate over time. The ETFs do not attempt to, and should not be expected to, provide returns which are a multiple of respective underlying security for periods other than a single day. For other risks including leverage, correlation, daily compounding, market volatility and risks specific to an industry, sector or company, please read the prospectus.
